Executive Summary

Homewood Consulting Pty Ltd has been engaged by Victorian Planning Authority (VPA) to assess and report on trees located within the Virginia Park Industrial Estate / proposed East Village precinct, East Bentleigh. The site located on the eastern side of East Boundary Road, near the intersection with North Road is approximately 2km² in area (Figure 1).

The site is intended to be redeveloped into a mixed use commercial/residential space. A final proposed design was not available for inclusion within this report. A proposed Precinct Structure Plan (PSP) is currently being prepared for the East Village precinct. As part of the design process relevant trees and groups of trees are required to be assessed to establish their retention values. Trees were assessed with regard to their physical characteristics, individual and landscape significance with a particular emphasis given to retention value. Trees that have been assessed are those within the defined area outlined by VPA.

Figure 1: Collection area and assessed trees

400 trees were assessed, of these:

- 5 trees were assessed 'Very High' retention value. They are dominant features in the landscape and are in good condition with long useful life expectancies (ULE's). All efforts should be made to incorporate these trees in final design plans and to protect them during construction activities.
- 73 trees were assessed 'High' retention value. They are generally large trees in fair condition with long ULE's. All reasonable efforts should be made to incorporate them in final design plans and to protect them during construction activities.
- 150 trees were assessed 'Medium' retention value. They are generally moderate-sized specimens in fair condition. If designing around these trees is not feasible or practical, removal and replacement would be an acceptable compromise.

- 172 trees were assessed 'Low' retention value. They are generally in poor condition, dead or are small sized. Trees in poor health or with significant defects in structure are not suitable for preservation in areas where people or structures will be located (Matheny & Clark 1998).

It is recommended that:

- The design team is made fully aware of the location of the trees to be retained and all required tree protection measures prior to beginning the design process, particularly Tree Protection Zone (TPZ) guidelines, dimensions and requirements.
- TPZ's for trees to be retained are shown on all design plans. The project arborist reviews the final plans including service locations.
- The proposed design ensures that the impact to the canopy of retained trees is kept to a minimum and does not encroach on the Tree Protection Zone (TPZ) of any trees to be retained. If it is impossible to keep construction out of the TPZ then encroachment must not exceed 10% of the TPZ area.
- Prior to the commencement of works, including demolition and the removal of existing trees, TPZ fencing is erected around all trees to be retained. TPZ guidelines outlined in section 6.3 and Appendix 2 are followed to ensure that all trees to be retained are adequately protected prior to, during and following the proposed construction on-site.
- Trees highlighted for removal are removed following approval from the local authority.
- Once TPZ fencing has been erected, the area contained within the fencing needs to be mulched with woodchips to a depth of 100mm.

Where trees are to be retained, pruning may be required. All pruning should be carried out by a fully qualified arborist experienced in pruning mature trees. The minimum qualification should be a National Certificate in Horticulture (Arboriculture) AQF Level 4. All pruning must conform to the Australian Standard Pruning of Amenity Trees (AS 4373-2007).

1. Introduction

Homewood Consulting Pty Ltd has been engaged to provide a report on trees within specific areas at the proposed East Village precinct in Bentleigh East. The subject area is industrial and commercial land and includes the following areas:

- 240-246 East Boundary Road, Bentleigh East
- 236-262 East Boundary Road, Bentleigh East (Virginia Park Industrial Estate)
- 234 East Boundary Road, Bentleigh East
- 232A East Boundary Road, Bentleigh East

A proposed Precinct Structure Plan (PSP) is currently being prepared for the East Village precinct. A final proposed design was not available for inclusion within this report. As part of the design process relevant trees and group of trees are required to be assessed to establish their retention values.

This report details the species, tree size, Diameter at Breast Height (DBH), health, structure, Useful Life Expectancy (ULE), contribution to the landscape, retention value and recommendations for long term management of the trees.

2. Key Objectives

- Identify and record the dimensions of trees within specific areas located across the East Village precinct site.
- Provide an assessment of the tree specimens with regard to:
 - their health and structure
 - their retention value in the landscape
- Provide recommendations for tree protection areas required during the design process and future construction works.

3. Methodology

3.1 Site Inspection

Site inspections were completed between Monday, 28 August 2017 and Wednesday, 30 August 2017 by Andrew Salo and Belinda Nance.

Data collected for the trees included:

- | | |
|---------------------------------------|--------------------------------|
| • Botanical Name | • Structure |
| • Canopy Dimensions | • Useful Life Expectancy (ULE) |
| • Diameter at Breast Height (DBH) | • Landscape Contribution |
| • Diameter above Root Buttress (DARB) | • Individual Significance |
| • Health | • Retention Value |

All DBH and DARB measurements were conducted using diameter tape.

A base survey plan has been supplied by Head and Humphreys Land Consultants (ref: 5009-00-SITE PLANS-20140116.DWG, dated: 16/01/2014). This plan has been used to locate the

trees on-site. Trees were assessed using differentially corrected GPS (generally +/- 1.0m accuracy).

Trees assessed have been determined based on collection criteria defined by the Victorian Planning Authority (VPA) Trees assessed can be defined within 3 key categories:

- All large trees taller than 4m and with DBH of 150mm or more were assessed as individual trees.
- Large quantity, low retention value trees were grouped with the largest tree of the group being assessed, (e.g. *Betula pendula*, Figure 2) to reduce and simplify the data set.
- Trees on private properties to be acquired were estimated for DBH and basal root measurements

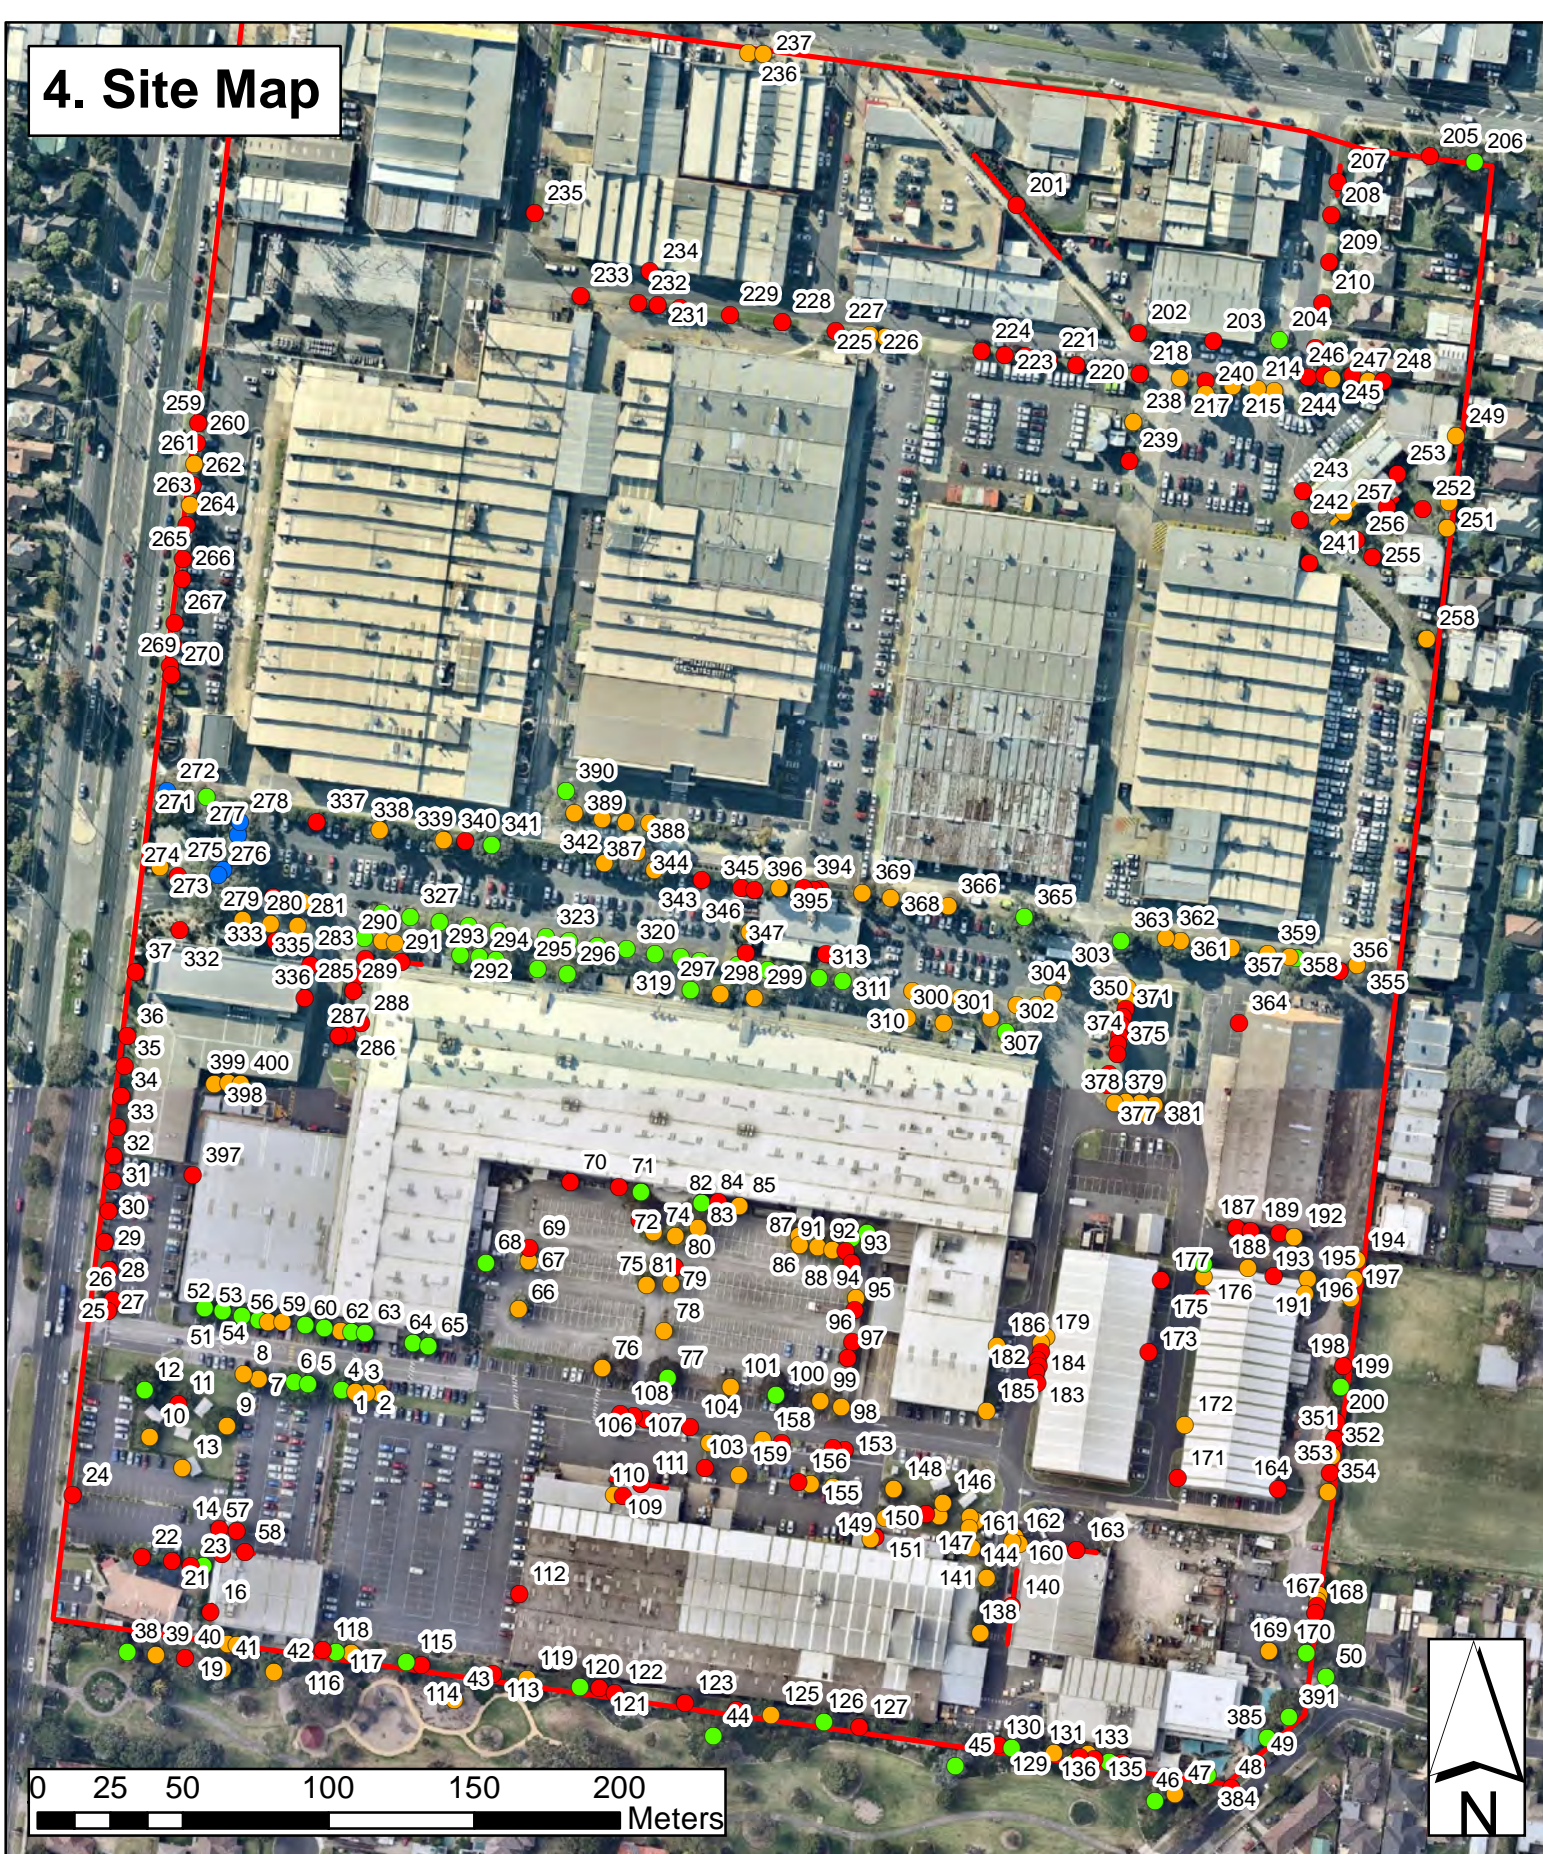

Figure 2: This row of four low retention value *Betula pendula* was assessed as a group (ID140)

Tree protection Zones (TPZ) have been provided however, in the absence of final design proposal, construction encroachment has not been calculated.

All assessments were conducted from ground level and assessments of decay are qualitative only. For full details of the information collected see appendices.

6. Observations / Discussions

6.1 Site Details

The site is a rectangular parcel of industrial zoned land bordered by roads to the east and north, residential property to the west and parkland to the south. The site is approximately 2km² in area containing commercial premises and parking. Site topography is mostly flat with the exception of a large soil cut along the southern boundary. Figure 3 and Figure 4 are fairly typical examples of clustered trees present on the site.

Figure 3: Main entrance from East Boundary Road looking west along North Drive

Figure 4: A small park on the corner of East Boundary Road and South Drive

6.2 Tree Details

In total 400 trees were assessed across the site comprised of 64 species. 5 species (*Platanus Xacerfolia*, *Betula pendula*, *Robinia pseudoacacia*, *Pyrus calleryana* 'Capital' and *Callistemon viminalis*) are the most dominant totalling 47% of the tree population (Table 1).

Platanus Xacerfolia is the most common species at approximately 17% of the total tree population. 250 of the assessed trees are planted exotics and 141 are Australian natives. Only 4 species (*Eucalyptus pauciflora*, *Eucalyptus viminalis*, *Eucalyptus camaldulensis* and *Eucalyptus ovata*) are indigenous to the local area.

Table 1: Summary of species assessed

Botanical Name	Common Name	Origin	Number of Individuals
<i>Platanus Xacerifolia</i>	London Plane	Exotic	66
<i>Betula pendula</i>	Silver Birch	Exotic	39
<i>Robinia pseudoacacia</i>	Black Locust	Exotic	33
<i>Pyrus calleryana</i> 'Capital'	Capital Callery Pear	Exotic	26
<i>Callistemon viminalis</i>	Weeping Bottle Brush	Australian Native	23
<i>Acer Xfreemanii</i>	Maple	Exotic	15
<i>Eucalyptus botryoides</i>	Southern Mahogany	Australian Native	15
<i>Eucalyptus leucoxylon</i>	Yellow Gum	Australian Native	12
<i>Syzygium australe</i>	Brush Cherry	Australian Native	10
<i>Corymbia ficifolia</i>	Flowering Gum	Australian Native	9
<i>Melaleuca styphelioides</i>	Prickly Paperbark	Australian Native	8
<i>Eucalyptus bicostata</i>	Eurabbie	Australian Native	7
<i>Ulmus parvifolia</i>	Chinese Elm	Exotic	7
<i>Melaleuca armillaris</i>	Giant Honey Myrtle	Australian Native	6
<i>Corymbia maculata</i>	Spotted Gum	Australian Native	6
<i>Cupressus sempervirens</i>	Italian Cypress	Exotic	5
<i>Pittosporum undulatum</i>	Sweet Pittosporum	Australian Native	5
<i>Corymbia citriodora</i>	Lemon-scented Gum	Australian Native	5
<i>Angophora costata</i>	Smooth-barked Apple Myrtle	Australian Native	5
<i>Alnus jorullensis</i>	Evergreen Alder	Exotic	5
<i>Ficus microcarpa</i> var. <i>hillii</i>	Hill's Weeping Fig	Australian Native	5
<i>Eucalyptus pauciflora</i>	White Sallee	Indigenous	4
<i>Eucalyptus camaldulensis</i>	River Red Gum	Indigenous	2
<i>Eucalyptus viminalis</i>	Manna Gum	Indigenous	2
<i>Eucalyptus ovata</i>	Swamp Gum	Indigenous	1
39 other mixed species			79
Total			400

6.2.1 Health and Structure

The general tree population is in fair to good condition. Over 90% of trees have 'Good' or 'Fair' health and 86% have 'Good' or 'Fair' structure (Table 2).

Table 2: Summary of Health and Structure

Rating	Health	Structure
Good	193	89
Fair	174	255
Poor	33	49
Very Poor	0	7
Total	400	400

The most common structural issues encountered was mechanical damage to branches, trunks and roots and associated decay. The prevalence of decay is most common in *Betula pendula* and *Robinia pseudoacacia* species (Figure 5 & Figure 6).

Figure 5: Tree 255, *Betula pendula*, with trunk damage and decay

Figure 6: Tree 73, *Robinia pseudoacacia*, with significant trunk decay

6.2.2 Useful Life Expectancy (ULE)

Useful Life Expectancy is an approximation of how long a tree can be retained usefully in the landscape at an acceptable level of risk. Simply put; young healthy trees are able to remain safely within the landscape longer than mature trees with structural defects (Figure 7 & Figure 8).

Figure 7: Tree 366, *Eucalyptus leucoxylon*; mature tree with a long ULE of 40+ years

Figure 8: Tree 242, *Alnus jorullensis*, mature tree with reduced ULE of 1-5 years

Table 3 summarises the ULE values given to the assessed trees showing 79% of trees have a ULE of greater than 10 years.

Table 3: Summary of ULE

ULE	Count Of ULE
40+ years	35
20-40 years	112
10-20 years	169
5-10 years	75
1-5 years	7
0 years	2
Total	400

6.2.3 Retention Values

Retention values have been allocated based on the combined arboricultural characteristics of health, structure, Useful Life Expectancy (ULE), size, significance within the landscape and as an individual.

Trees assessed 'Very High' Retention Value

5 trees were assessed 'Very High' retention value (Table 4). They are dominant features in the landscape and are in good or fair condition with long ULE's. All efforts should be made to incorporate them in final design plans and to protect them during construction activities. Trees assessed 'Very High' retention value all have a 'High' contribution to the landscape and a 'Valuable' or 'Outstanding' individual significance.

Tree 275 *Corymbia citriodora* (Figure 9) exhibits 'Fair' health and 'Fair' structure, while Tree 276 *Corymbia citriodora* (Figure 9) exhibits 'Good' health and 'Fair' structure. Both trees have a ULE of 20-40 years. Both are dominant features of the landscape.

Figure 9: Tree 275 on the right and Tree 276 on the left, both *Corymbia citriodora*, were assessed as 'Very High' retention.

Trees assessed 'High' Retention Value

73 trees were assessed 'High' retention value (Table 4). They are generally large trees in fair condition with long ULE's. All reasonable efforts should be made to incorporate them in final design plans and to protect them during construction activities. Most trees assessed 'High' retention have a 'High' or 'Medium' contribution to the landscape and 'Valuable' or 'Moderate' individual significance.

Tree 100 *Eucalyptus leucoxylon* (Figure 10) exhibits 'Good' health and structure with a ULE of 20-40 years. Tree 271 *Corymbia citriodora* (Figure 11) exhibits 'Good' health and 'Fair' structure with a ULE of greater than 40 years.

Figure 10: Tree 100, *Eucalyptus leucoxylon* assessed as 'High' retention value

Figure 11: Tree 271, *Corymbia citriodora* assessed as 'High' retention value

Trees assessed 'Medium' Retention Value

150 trees were assessed 'Medium' retention value (Table 4). They are moderate or large sized specimens ranging from fair to poor condition. If designing around these trees is not feasible or practical, removal and replacement would be an acceptable compromise.

Most trees assessed 'Medium' retention have a 'Medium' landscape contribution and a 'Moderate' or 'Low' individual significance.

Tree 141 *Tristaniopsis laurina* (Figure 12) has 'Fair' health and structure with a ULE of 10-20 years, but only a 'Medium' landscape contribution and 'Moderate' individual significance.

Tree 98 *Eucalyptus ovata* (Figure 13) exhibits 'Good' health and 'Fair' structure with a ULE of 10-20 years. Retention value has been reduced due to the presence of significant trunk decay and previous branch failures.

Figure 12: Tree 141 *Tristaniopsis laurina*

Figure 13: Tree 98 *Eucalyptus ovata*

Trees assessed 'Low' Retention Value

172 trees were assessed 'Low' retention value (Table 4) given they are in poor condition, dead or small sized. Trees in poor health or with significant structural defects are not suitable for preservation in areas where people or structures will be located (Matheny & Clark 1998). Smaller trees are generally more easily replaced within a new landscape, reducing the necessity to modify plans for retention.

Tree 241 *Betula pendula* (Figure 14) has 'Poor' health and 'Very Poor' structure. A reduced ULE of 1-5 years has been assigned due to significant trunk decay associated with canopy lopping.

Tree 393 *Eucalyptus botryoides* (Figure 15) has a 'Medium' landscape contribution and is in 'Good' health, however has a reduced retention value due to its 'Poor' structure as it is regrown from a stump.

Figure 14: Tree 241 *Betula pendula*; a small tree assessed 'Low' retention value

Figure 15: Tree 393 *Eucalyptus botryoides*; poor structured tree assessed 'Low' retention value

Retention Value Summary

Over 80% of trees are 'Medium' or 'Low' retention value (Table 1). This percentage is closely attributed to the small and medium sized species found on site.

Table 4: Summary of Retention Value

Retention Value	Count Of Retention Value
Very High	5
High	73
Medium	150
Low	172
Total	400

6.3 Tree Protection Zone Specifications

Damage to trees during development can be direct and indirect.

Direct damage includes mechanical injury to the trunk, the severing of roots, or alterations to the soil environment in the immediate vicinity of tree roots (i.e. compaction or loss of organic matter).

Indirect effects of site development are usually related to soil hydrology. This includes alterations to soil moisture content, changes in the level of the water table and drainage patterns (Coder 1995).

The most common method of protecting trees during construction is by setting up a Tree Protection Zone (TPZ).

TPZs have been calculated according to *Protection of Trees on Development Sites* (AS 4970-2009) for all trees to be retained (excluding palms) calculating the TPZ as 12 times the trunk diameter at 1.4m above ground level (DBH).

Figure 16: The SRZ = minimum volume of roots required for tree stability. Image from Biddle 1998.

Guidelines to successfully erecting and implementing tree protection during demolition, excavation and construction phases of site works can be found in Appendix 2.

6.4 Construction Encroachment

A final proposed design was not available for inclusion within this report. TPZ radii have been calculated and applied to the TPZ maps in Appendix 3. Percentage of TPZ encroachment has not been calculated.

Under the guidelines set out by AS 4970-2009: *Australian Standard, Protection of Trees on Development Sites*; construction encroachment can be categorised as 'Minor encroachment' and 'Major encroachment'.

6.4.1 Minor encroachment

Encroachment of less than 10% of the TPZ and outside the SRZ is deemed to be minor encroachment according to AS 4970-2009. Detailed root investigations should not be required but must be compensated with an extension to the TPZ elsewhere (Figure 17). Variations must be made by the project arborist considering other relevant factors including tree health, vigour, stability, species sensitivity and soil characteristics.

Figure 17: Example of TPZ encroachment and compensatory offset (image from AS 4970-2009)

6.4.2 Major encroachment AS 4970-2009

Encroachment of more than 10% of the TPZ or into the SRZ is deemed to be major encroachment according to AS 4970-2009. The project arborist must demonstrate that the tree(s) would remain viable. The area lost to this encroachment should be compensated for elsewhere and contiguous with the TPZ. This may require root investigation by non-destructive methods and consideration of relevant factors tree health, vigour, stability, species sensitivity and soil characteristics.

6.5 Ideal Work Flow and Arborist Involvement

Consideration should be given to retention of worthy trees within the final Precinct Structure Plan (PSP). This can only be assessed accurately once the proposed design is finalised. Figure 18 depicts the ideal planning and construction stages in which the project Arborist should be involved.

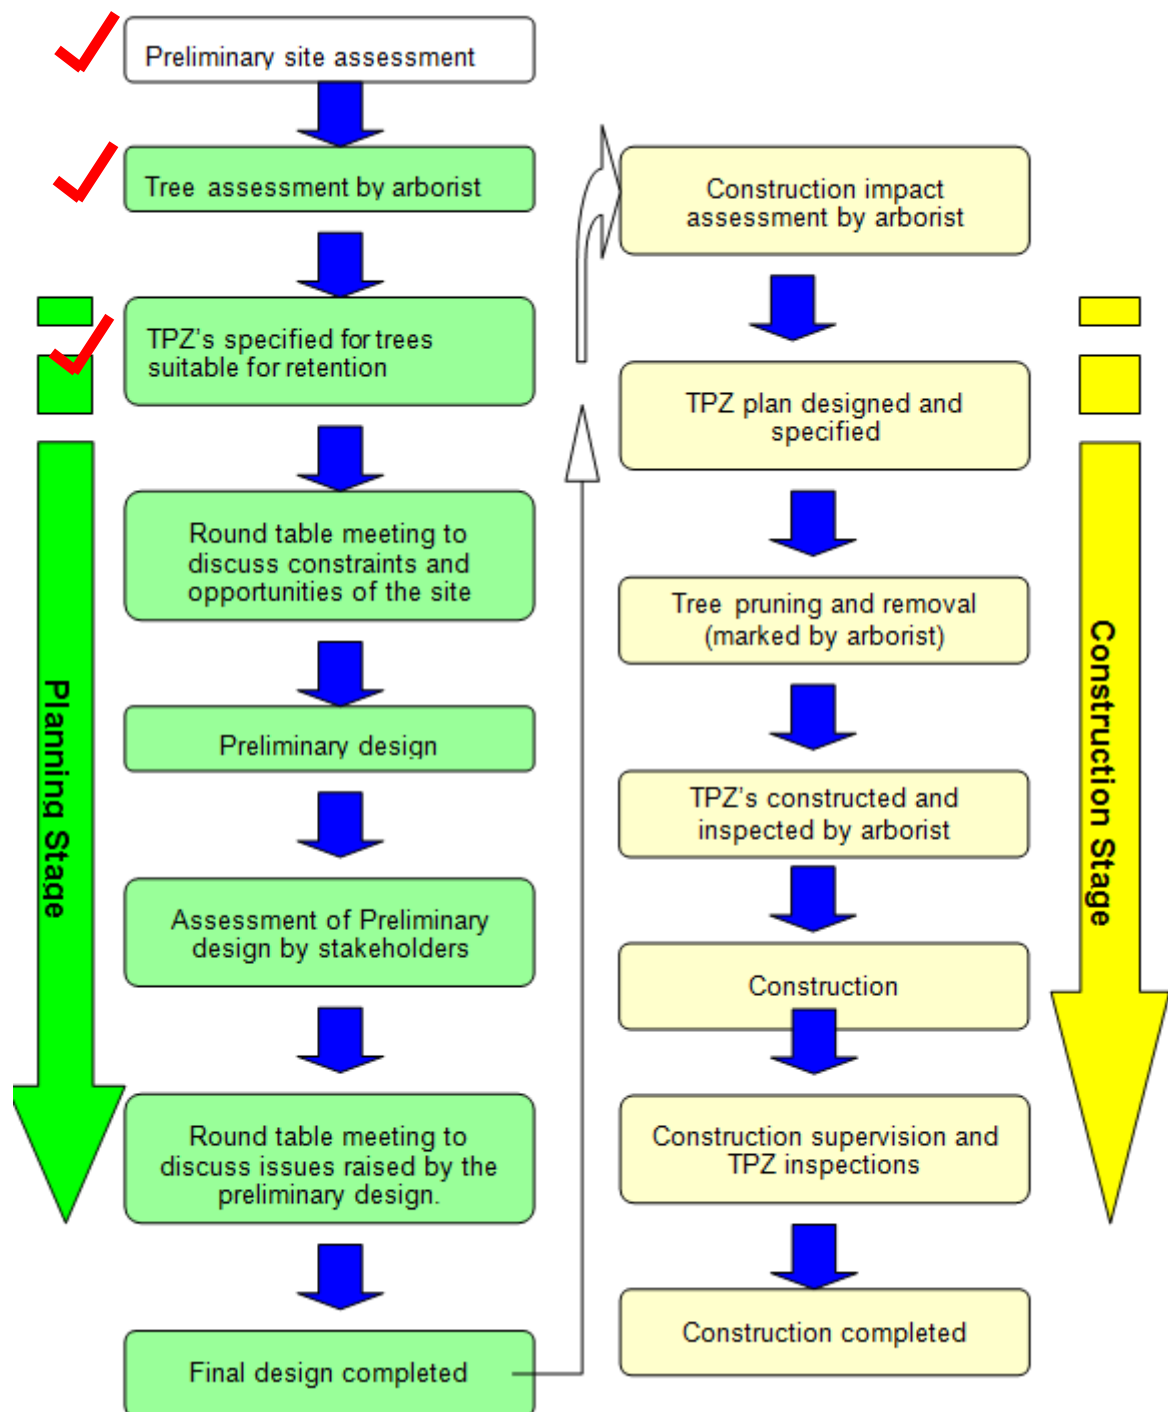

Figure 18: Planning and construction stages

7. Design Proposal & Considerations

The site is currently zoned for industrial/commercial use. The proposed design involves re-developing the site into a mixed use commercial/retail/residential precinct. Areas of the site will also be converted to open parks and pedestrian friendly laneways. Figure 19 shows a concept design with the existing trees and TPZs overlaid.

Figure 19: Concept design with tree and TPZ locations overlaid

7.1 Design considerations

7.1.1 Amenity Value

Beyond the customary assessment criteria used to determine tree retention values; amenity value should be considered to future or proposed landscapes. In particular mature trees offer a significant amenity benefit to urban landscapes by providing shade, moderating temperature, winds and rainfall. Mature trees also assist in giving newly developed or constructed landscapes an established feel and appearance.

7.1.2 Established Avenues

All of the *Platanus* species trees onsite are arranged into two formal avenues (Figure 20). Individual retention values for these trees ranged from 'High', 'Medium' and 'Low'. However, when considered as whole established avenues the retention value can be thought of as 'High'. Utilising the existing roadways in the new design will facilitate the retention of these avenues.

Figure 20: Main Avenue of *Platanus Xacerfolia* provides significant amenity

7.1.3 Site Topography

Along the southern boundary of the site is a large exposed soil cut and retaining wall (Figure 21). 28 trees (ID43-45 & 113-137) are located on top of this retaining wall/cut. Any designs that involve further cut into the soil will likely result in 'Major' TPZ encroachments for most of these trees. Retention of these trees is largely dependent on incorporating the existing exposed soil cut and retaining wall into the final proposed design.

Figure 21: Exposed earth cut and retaining wall

7.1.4 Tree Pruning

Where mature trees are to be retained within the final plans it is highly likely that pruning will be required to remove minor defects.

Pruning of mature trees should be carried out in accordance with Australian Standard *Pruning of Amenity Trees* (AS 4373-2007). Most trees worthy of retention onsite are mature and the health, structure and visual amenity of these trees should be considered during pruning works.

All pruning should be carried out by a fully qualified arborist experienced in pruning mature trees.

The minimum qualification should be a National Certificate in Horticulture (Arboriculture) AQF Level 4.

All pruning must conform to the Australian Standard *Pruning of Amenity Trees* (AS 4373-2007).

8. Conclusions

In total 400 trees were assessed in order to establish their retention viability within designs to redevelop Virginia Park Industrial estate into a mixed use residential/commercial site.

Of the trees:

- 5 were assessed 'Very High' retention value
 - They are dominant features of the landscape growing in close proximity to each other and are in good condition with long ULE's. All efforts should be made to incorporate them in final design plans and to protect them during construction activities.
- 73 were assessed 'High' retention value
 - They are generally large trees in fair condition with long ULE's. All reasonable efforts should be made to incorporate them in final design plans and to protect them during construction activities.
- 150 were assessed 'Medium' retention value
 - The trees are moderate or large sized specimens in condition ranging from fair to poor. If designing around these trees is not feasible or practical, removal and replacement would be an acceptable compromise.
- 172 were assessed 'Low' retention value
 - They are generally in poor condition, dead or are small sized. Trees in poor health or with significant defects in structure are not suitable for preservation in areas where people or structures will be located (Matheny & Clark 1998).

Appendix 1. Data Collection Definitions

The information collected on each specimen was based on the assessor's experience and opinion of each of the trees. Included are the descriptions for each of the listed categories. The following information was collected on each tree.

1.1 Botanical name:

The genus, species and common name.

1.2 Canopy dimensions

Height (approximate) and width (measured) of the canopy in metres.

1.3 DBH

Diameter at breast height (measured at 1.3m above ground level).

1.4 Health

Table 5: Health Definition

Term	Definition
Excellent	The tree is demonstrating excellent or exceptional growth. The tree should exhibit a full canopy of foliage and be free of pest and disease problems.
Good	The tree is demonstrating good or exceptional growth. The tree should exhibit a full canopy of foliage, and have only minor pest or diseases problems.
Fair	The tree is in reasonable condition and growing well. The tree should exhibit an adequate canopy of foliage. There may be some deadwood present in the crown. Some grazing by insects or possums may be evident.
Poor	The tree is not growing to its full capacity; extension growth of the laterals is minimal. The canopy may be thinning or sparse. Large amounts of deadwood may be evident throughout the crown. Significant pest and disease problems may be evident or symptoms of stress indicating tree decline.
Very Poor	The tree appears to be in a state of decline. The tree is not growing to its full capacity. The canopy may be very thin and sparse. A significant volume of deadwood may be present in the canopy or pest and disease problems may be causing a severe decline in tree health.
Dead	The tree is dead.

1.5 Structure

Table 6. Structure Definition

Term	Definition
Good	The tree has a well defined and balanced crown. Branch unions appear to be strong, with no defects evident in the trunk or the branches. Major limbs are well defined. The tree is considered a good example of the species.
Fair	The tree has some minor problems in the structure of the crown. The crown may be slightly out of balance, and some branch unions may be exhibiting minor structural faults. If the tree has a single trunk, it may be on a slight lean or exhibiting minor defects.
Poor	The tree may have a poorly structured crown. The crown may be unbalanced or exhibit large gaps. Major limbs may not be well defined. Branches may be rubbing or crossing over. Branch unions may be poor or faulty at the point of attachment. The tree may have suffered root damage.
Very Poor	The tree has a poorly structured crown. The crown is unbalanced or exhibit large gaps with possibly large sections of deadwood. Major limbs may not be well defined. Branches may be rubbing or crossing over. Branch unions may be poor or faulty at the point of attachment. Branches may exhibit large cracks that are likely to fail in the future. The tree may have suffered major root damage.
Failed	The tree has a very poorly structured crown. A section of the tree has failed or is in imminent danger of failure.

1.6 Useful Life Expectancy (ULE) Rating

Useful Life Expectancy is approximately how long a tree can be retained safely and usefully in the landscape.

Table 7. ULE Definition

Term	Definition
Unsafe	The tree is considered dangerous in the location and has no significant amenity value.
Less than 5 years	The tree, under normal circumstances and without extra stresses being imposed on it, should be safe and have value for up to five years, but will need to be replaced. During this period, normal inspections and maintenance will be required. If possible, replacement trees should be planted.
5 – 10 years	The tree, under normal circumstances and without extra stresses being imposed on it, should be safe and of value for up to ten years. During this period, normal inspections and maintenance will be required.
11 – 20 years	The tree, under normal circumstances and without extra stresses being imposed on it, should be safe and of value for up to twenty years. During this period, normal inspections and maintenance will be required.
20 – 40 years	The tree, under normal circumstances and without extra stresses being imposed on it, should be safe and of value for up to forty years. During this period, normal inspections and maintenance will be required.
Greater than 40 years	The tree, under normal circumstances and without extra stresses being imposed on it, should be safe and of value for greater than forty years. During this period, normal inspections and maintenance will be required.

1.7 Tree Origin

Table 8. Tree Origin Definition

Term	Definition
Exotic	The species originates in a country other than Australia.
Native	The species originates within Australia.
Indigenous	The species originates within the local environs.

1.8 Contribution to the Landscape Rating

Table 9. Contribution to the Landscape Rating Definition

Term	Definition
High	The tree may be significant in the landscape, offer shade and other amenities such as screening. The tree may assist with erosion control, offer a windbreak or perform a vital function in the location (Eg: Habitat, shade, flowers or fruit).
Medium	The tree may offer some screening in the landscape or serve a particular function in the location.
Low	The tree offers very little in the way of screening or amenity.

1.9 Tree Significance Rating

This rating system is used to rate the significance of trees in a local area. Some trees identified in local areas may be suitable for National or State registration. Trees that have State or National significance would normally be registered by The National Trust and identified as such. This system of rating and any values expressed represents the opinion of the consultant.

Trees may be considered significant in a local area if they fit into one or more of the following categories.

- Exceptional size
- Rare
- Very old
- Unusual shape or form
- Aboriginal cultural value
- Historic value
- Exceptional example of a species
- Economic, genetic
- Outstanding feature in the landscape
- Habitat value
- Erosion control

Table 10. Tree Significance Rating Definition

Term	Definition
------	------------

Term	Definition
Exceptional	A tree is considered exceptional because several of the preceding categories apply to the specimen. This tree is normally one that creates a profound effect on the local area and has an exceptional impact on the tree surveyor
Outstanding	A tree is considered outstanding because one or several of the preceding categories apply to the specimen. This tree is normally one that attracts attention and has a noticeable impact on the area and the tree surveyor.
Valuable	A tree is considered valuable because at least one of the preceding categories may be applicable or partially to the specimen. This tree is normally one that is a reasonable specimen without any particular outstanding features. It normally has a diameter at breast height over 1000mm and has good to average health and structure.
Moderate	A tree is considered to have moderate value because it may be in reasonable condition but may only partially fulfil any one factor. It generally has a diameter at breast height of less than 1000mm and an average or poor health and structure.
Low value	As an individual specimen, the tree is not considered significant. This may be a small specimen, with poor health or structure and be common in occurrence or possibly a weed species. This tree has no impact on the tree surveyor.
Negligible	As an individual specimen, the tree is not considered significant. This may be a very small specimen with very poor health and structure and may be common in occurrence or a weed species. This tree has no impact on the tree surveyor.

1.10 Retention Value of the Tree

Table 11. Retention Value of the Tree Definition

Term	Definition
Very High	The tree is highly suited to the site and offers significant amenity or screening to the site. The tree is normally in fair to good health and has fair to good structure. In some circumstances a tree should be retained for cultural/historic reasons, because it is indigenous, old, remnant or because the tree (regardless of species) may offer vital screening for surrounding properties. The tree could be considered for inclusion into a significant tree register.
High	The tree is well suited to the site and offers amenity or screening to the site. The tree is normally in fair to good health and has fair to good structure. In some circumstances a tree may need to be retained for cultural/historic reasons, because it is indigenous, old, remnant or because the tree (regardless of species) may offer vital screening for surrounding properties.
Moderate	The tree is suited to the site and, if practical, designs should be altered to accommodate the tree. This category may contain trees that are juvenile or semi-mature specimens that can potentially be replaced with standard nursery stock. It may be possible to transplant trees rated in this category.
Low	The tree is not worth retaining in the landscape. The tree may be considered a weed species, structurally unsound, dead/dying/diseased, nearing the end of its ULE or may not be suitable for the site.
Third party ownership	The tree is located outside of the subject site. It may be owned by a private entity (residential) or public body (council). For all purposes, a third party is assumed to have ownership of the tree. The tree has been assessed on the assumption that its owner requires retention of the tree. It is neither a recommendation of good health of the tree, or

Term	Definition
	suitability for retention. Discussions with the relevant parties and authorities may result in the removal of a tree assessed in this category.

Appendix 2. Tree Protection Zone Guidelines

The TPZ fence is designed to act as a physical barrier of protective fencing that is a minimum of 1.8m high. It is erected around retained specimens (at the edge of the TPZ) before site works commence. See Figure 22.

Figure 22: TPZ fencing is erected around retained trees prior to site works.

Careful adherence to the following exclusions and inclusions will maintain the health and longevity of retained tree specimens.

Exclude the following from taking place within any TPZ (adapted from AS 4970-2009):

- built structures or hard landscape features (i.e. paving, retaining walls)
- materials storage (i.e. equipment, fuel, building waste or rubble)
- soil disturbance (i.e. stripping or grade changes)
- excavation works including soil cultivation (specifically surface-dug trenches for underground utilities)
- placement of fill
- lighting of fires
- preparation of chemicals, including preparation of cement products
- pedestrian or vehicular access (i.e. pathways).

Include the following procedures in setting up and maintaining any TPZ (adapted from AS 4970-2009):

- erect warning signs at regular intervals along the entire length of any protective TPZ fencing (Figure 23)
- construct TPZ fencing to prevent pedestrian access into the protected area.
- mulch the TPZ area to a depth of 150mm with woodchips (if available, use woodchips generated from on-site tree clearing).
- irrigate TPZs periodically, as determined by the consulting arborist.

TPZ guidelines need to adhere to all stages of the design and construction process and are relevant to all on-site utilities.

Figure 23: Example of a TPZ warning sign clearly displayed on TPZ fencing

Appendix 5. Individual Tree Data

Asset ID:	1	Retention Value	
Botanical Name:	Platanus Xacerifolia		
Common Name:	London Plane		
Origin:	Exotic		
Canopy Dimensions (m):	8m x 4m	DBH (cm):	19
Maturity:	Semi mature	Health:	Good
ULE:	40+ years	Structure:	Good
Comments:			

Retention Value:	Medium	TPZ radius (m):	2.28
		SRZ radius (m):	1.82

Asset ID:	2	Retention Value	
Botanical Name:	Platanus Xacerifolia		
Common Name:	London Plane		
Origin:	Exotic		
Canopy Dimensions (m):	9m x 4m	DBH (cm):	24
Maturity:	Semi mature	Health:	Good
ULE:	40+ years	Structure:	Good
Comments:			

Retention Value:	Medium	TPZ radius (m):	2.88
		SRZ radius (m):	1.91

Asset ID:	3	Retention Value	
Botanical Name:	Platanus Xacerifolia		
Common Name:	London Plane		
Origin:	Exotic		
Canopy Dimensions (m):	10m x 4m	DBH (cm):	23
Maturity:	Semi mature	Health:	Good
ULE:	40+ years	Structure:	Good
Comments:			

Retention Value:	Medium	TPZ radius (m):	2.76
		SRZ radius (m):	1.94

Asset ID:	4	Retention Value	
Botanical Name:	Platanus Xacerifolia		
Common Name:	London Plane		
Origin:	Exotic		
Canopy Dimensions (m):	12m x 5m	DBH (cm):	42
Maturity:	Mature	Health:	Good

		SRZ radius (m):	3.04

Asset ID:	200		
Botanical Name:	<i>Syzygium australe</i>		
Common Name:	Brush Cherry		
Origin:	Native		
Canopy Dimensions (m):	8m x 6m	DBH (cm):	64
Maturity:	Mature	Health:	Fair
ULE:	5-10 years	Structure:	Fair
Comments:			

Retention Value:	Low	TPZ radius (m):	7.68
		SRZ radius (m):	2.85

Asset ID: 201
Botanical Name: *xCupressocyparis leylandii*
Common Name: Leyland Cypress
Origin: Exotic

Retention Value: Low
TPZ radius (m): 2.4
SRZ radius (m): 1.75

Canopy Dimensions (m): 6m x 3m **DBH (cm):** 20
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Fair
Comments: Row of 42 trees

Asset ID: 202
Botanical Name: *Ulmus parvifolia*
Common Name: Chinese Elm
Origin: Exotic

Retention Value: Low
TPZ radius (m): 4.32
SRZ radius (m): 2.47

Canopy Dimensions (m): 10m x 7m **DBH (cm):** 36
Maturity: Mature **Health:** Fair
ULE: 10-20 years **Structure:** Poor
Comments: Basal measurement estimated

Asset ID: 203
Botanical Name: *Ulmus parvifolia*
Common Name: Chinese Elm
Origin: Exotic

Retention Value: Low
TPZ radius (m): 2
SRZ radius (m): 1.65

Canopy Dimensions (m): 5m x 5m **DBH (cm):** 13
Maturity: Semi mature **Health:** Good
ULE: 5-10 years **Structure:** Fair
Comments: Inappropriate location

Asset ID: 204
Botanical Name: *Eucalyptus botryoides*
Common Name: Southern Mahogany
Origin: Native

Retention Value: High
TPZ radius (m): 6.12
SRZ radius (m): 2.71

Canopy Dimensions (m): 14m x 10m **DBH (cm):** 51
Maturity: Mature **Health:** Fair
ULE: 40+ years **Structure:** Fair
Comments:

Asset ID:	205		
Botanical Name:	<i>Liquidambar styraciflua</i>		
Common Name:	Liquidamber		
Origin:	Exotic		
Canopy Dimensions (m):	16m x 15m	DBH (cm):	70
Maturity:	Mature	Health:	Fair
ULE:	5-10 years	Structure:	Very poor
Comments:	DBH measurement estimated		

Retention Value:	Low	TPZ radius (m):	8.4
		SRZ radius (m):	2.93

Asset ID:	206		
Botanical Name:	<i>Liquidambar styraciflua</i>		
Common Name:	Liquidamber		
Origin:	Exotic		
Canopy Dimensions (m):	14m x 12m	DBH (cm):	65
Maturity:	Mature	Health:	Fair
ULE:	10-20 years	Structure:	Poor
Comments:			

Retention Value:	High	TPZ radius (m):	7.8
		SRZ radius (m):	2.85

Asset ID: 207
Botanical Name: *Olea europaea*
Common Name: European Olive
Origin: Exotic

Retention Value:	Low	TPZ radius (m):	2
		SRZ radius (m):	1.61

Canopy Dimensions (m): 4m x 3m **DBH (cm):** 15
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Fair
Comments: Row of 3 individuals

Asset ID: 208
Botanical Name: *Alnus jorullensis*
Common Name: Evergreen Alder
Origin: Exotic

Retention Value:	Low	TPZ radius (m):	4.56
		SRZ radius (m):	2.45

Canopy Dimensions (m): 7m x 9m **DBH (cm):** 38
Maturity: Mature **Health:** Fair

TPZ radius (m): 2

SRZ radius (m): 1.5

Asset ID:	334	Retention Value	
Botanical Name:	<i>Acer platanoides</i>		
Common Name:	Norway Maple		
Origin:	Exotic		
Canopy Dimensions (m):	3m x 2m	DBH (cm):	12
Maturity:	Semi mature	Health:	Fair
ULE:	5-10 years	Structure:	Poor
Comments:			

Retention Value:

Low

TPZ radius (m): 2

SRZ radius (m): 1.53

Asset ID: 335
Botanical Name: *Acer platanoides*
Common Name: Norway Maple
Origin: Exotic

Retention Value: Low
TPZ radius (m): 2
SRZ radius (m): 1.57

Canopy Dimensions (m): 3m x 2m **DBH (cm):** 14
Maturity: Semi mature **Health:** Fair
ULE: 5-10 years **Structure:** Poor
Comments:

Asset ID: 336
Botanical Name: *Betula pendula*
Common Name: Silver Birch
Origin: Exotic

Retention Value: Low
TPZ radius (m): 2.52
SRZ radius (m): 1.85

Canopy Dimensions (m): 4m x 3m **DBH (cm):** 21
Maturity: Semi mature **Health:** Fair
ULE: 5-10 years **Structure:** Poor
Comments:

Asset ID:	337		
Botanical Name:	<i>Corymbia ficifolia</i>		
Common Name:	Flowering Gum		
Origin:	Native		
Canopy Dimensions (m):	5m x 5m	DBH (cm):	34
Maturity:	Mature	Health:	Fair
ULE:	1-5 years	Structure:	Very poor
Comments:	Regrowth from stump		

Retention Value:	Low	TPZ radius (m):	4.08
		SRZ radius (m):	2.51

Asset ID:	338		
Botanical Name:	<i>Corymbia ficifolia</i>		
Common Name:	Flowering Gum		
Origin:	Native		
Canopy Dimensions (m):	10m x 11m	DBH (cm):	69
Maturity:	Mature	Health:	Fair
ULE:	10-20 years	Structure:	Fair
Comments:	Evidence of previous branch failure		

Retention Value:	Medium	TPZ radius (m):	8.28
		SRZ radius (m):	2.97

Asset ID: 339
Botanical Name: *Corymbia ficifolia*
Common Name: Flowering Gum
Origin: Native

Retention Value:	Medium	TPZ radius (m):	6.96
		SRZ radius (m):	2.74

Canopy Dimensions (m): 9m x 8m **DBH (cm):** 58
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Fair
Comments:

Asset ID: 340
Botanical Name: *Ligustrum lucidum*
Common Name: Privet
Origin: Exotic

Retention Value:	Low	TPZ radius (m):	3.72
		SRZ radius (m):	2.23

Canopy Dimensions (m): 6m x 5m **DBH (cm):** 31
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Poor
Comments:

Asset ID:	341		
Botanical Name:	<i>Corymbia ficifolia</i>		
Common Name:	Flowering Gum		
Origin:	Native		
Canopy Dimensions (m):	12m x 16m	DBH (cm):	100
Maturity:	Mature	Health:	Good
ULE:	10-20 years	Structure:	Fair
Comments:			

Retention Value:	High	TPZ radius (m):	12
		SRZ radius (m):	3.46

Asset ID:	342		
Botanical Name:	<i>Corymbia ficifolia</i>		
Common Name:	Flowering Gum		
Origin:	Native		
Canopy Dimensions (m):	6m x 7m	DBH (cm):	84
Maturity:	Mature	Health:	Fair
ULE:	10-20 years	Structure:	Fair
Comments: Possum damage, Basal measurement estimated			

Retention Value:	Medium	TPZ radius (m):	10.08
		SRZ radius (m):	3.24

Asset ID: 343
Botanical Name: *Corymbia ficifolia*
Common Name: Flowering Gum
Origin: Native

Retention Value:	Medium	TPZ radius (m):	11.88
		SRZ radius (m):	3.34

Canopy Dimensions (m): 6m x 9m **DBH (cm):** 99

Maturity: Mature **Health:** Fair

ULE: 5-10 years **Structure:** Fair

Comments: Evidence of previous branch failure, bracket fungi on trunk

Asset ID: 344
Botanical Name: *Cotoneaster glaucophyllus* var. *serotinus*
Common Name: Cotoneaster
Origin: Exotic

Retention Value:	Low	TPZ radius (m):	2.52
		SRZ radius (m):	1.72

Canopy Dimensions (m): 5m x 4m **DBH (cm):** 21

Maturity: Mature **Health:** Fair

ULE: 5-10 years **Structure:** Poor

Comments:

Asset ID:	345		
Botanical Name:	<i>Pittosporum undulatum</i>		
Common Name:	Sweet Pittosporum		
Origin:	Native		
Canopy Dimensions (m):	6m x 5m	DBH (cm):	19
Maturity:	Mature	Health:	Good
ULE:	10-20 years	Structure:	Fair
Comments:			

Retention Value:	Low	TPZ radius (m):	2.28
		SRZ radius (m):	1.85

Asset ID:	346		
Botanical Name:	<i>Melaleuca styphelioides</i>		
Common Name:	Prickly Paperbark		
Origin:	Native		
Canopy Dimensions (m):	7m x 7m	DBH (cm):	41
Maturity:	Mature	Health:	Good
ULE:	10-20 years	Structure:	Fair
Comments:			

Retention Value:	Medium	TPZ radius (m):	4.92
		SRZ radius (m):	2.71

Asset ID: 347
Botanical Name: *Ficus microcarpa* var. *hillii*
Common Name: Hill's Weeping Fig
Origin: Native

Retention Value: Low
TPZ radius (m): 3.36
SRZ radius (m): 1.88

Canopy Dimensions (m): 7m x 5m **DBH (cm):** 28
Maturity: Semi mature **Health:** Good
ULE: 10-20 years **Structure:** Fair
Comments: Row of 3 individuals

Asset ID: 348
Botanical Name: *Pyrus calleryana* 'Capital'
Common Name: Capital Callery Pear
Origin: Exotic

Retention Value: Medium
TPZ radius (m): 2.4
SRZ radius (m): 1.94

Canopy Dimensions (m): 7m x 5m **DBH (cm):** 20
Maturity: Semi mature **Health:** Good

Canopy Dimensions (m): 13m x 7m **DBH (cm):** 43
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Poor
Comments: Basal and DBH measurement estimated

Asset ID: 396
Botanical Name: *Eucalyptus botryoides*
Common Name: Southern Mahogany
Origin: Native

Retention Value:	Low	TPZ radius (m):	4.08
		SRZ radius (m):	2.39

Canopy Dimensions (m): 8m x 5m **DBH (cm):** 34
Maturity: Mature **Health:** Fair
ULE: 10-20 years **Structure:** Fair
Comments: Basal measurement estimated

Asset ID: 397

Botanical Name: *Prunus sp.*

Common Name: Plum

Origin: Exotic

Retention Value:

Low

TPZ radius (m): 2

SRZ radius (m): 1.72

Canopy Dimensions (m): 5m x 4m **DBH (cm):** 16

Maturity: Mature **Health:** Fair

ULE: 10-20 years **Structure:** Fair

Comments:

Asset ID: 398

Botanical Name: *Acer Xfreemanii*

Common Name: Maple

Origin: Exotic

Retention Value:

Medium

TPZ radius (m): 3.36

SRZ radius (m): 2

Canopy Dimensions (m): 8m x 7m **DBH (cm):** 28

Maturity: Mature **Health:** Good

ULE: 10-20 years **Structure:** Good

Comments: Basal and DBH measurement estimated

Asset ID: 399
Botanical Name: *Pyrus calleryana* 'Capital'
Common Name: Capital Callery Pear
Origin: Exotic

Retention Value: Medium
TPZ radius (m): 2.04
SRZ radius (m): 1.65

Canopy Dimensions (m): 7m x 3m **DBH (cm):** 17
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Fair
Comments: Basal and DBH measurement estimated

Asset ID: 400
Botanical Name: *Pyrus calleryana* 'Capital'
Common Name: Capital Callery Pear
Origin: Exotic

Retention Value: Medium
TPZ radius (m): 2.64
SRZ radius (m): 1.85

Canopy Dimensions (m): 8m x 4m **DBH (cm):** 22
Maturity: Mature **Health:** Good
ULE: 10-20 years **Structure:** Fair
Comments: Basal and DBH measurement estimated
