yes please, here is my submission with dot points

- concern over increased traffic using the GV Hwy and River Rd West intersection due to the new sub division on Doyles rd
- concern over increased chance of accident due to increased traffic flow
- concern over increased chance of serious injury or death due to increased use of intersection
- concern that this intersection is not going to be upgraded in the plans leaving residence vulnerable to injury or death
- concerns for further generations (our kids) using this intersection in the future
- concerns that if this intersection doesn't get an upgrade at the time of the sub division it wont in the future
- the time is now to upgrade this dangerous intersection before the sub division works start and before someone is killed due to increased traffic.

thanks Louise
