## **List of appendices**

Appendix A Native Vegetation Removal Report

Appendix B Report of available native vegetation credits – 08/04/2026

# 1 Introduction

This Greater Avalon Employment Precinct West (GAEPW) Native Vegetation Precinct Plan (NVPP) is to be listed under the Schedule to Clause 52.16 of the Greater Geelong Planning Scheme. This NVPP includes the information required under Section 10 of *Guidelines for the removal, destruction or lopping of native vegetation* (DELWP, 2017) (Guidelines). As per the Guidelines, an NVPP prepared for incorporation into the planning scheme must:

- specify the **purpose** and objectives of the plan
- specify the **area** to which the NVPP applies
- map and describe the native vegetation that can be **removed**, destroyed or lopped
- map and describe the native vegetation to be **retained**
- set out the **offset requirement**, determined in accordance with the Guidelines, for native vegetation that can be removed, destroyed or lopped
- specify **management** responsibilities and actions for native vegetation to be retained, and
- provide an **offset statement** that includes evidence that an offset that meets offset requirements for the removal of native vegetation is available and explains how it will be secured in accordance with the Guidelines if the NVPP is incorporated. This statement must also include procedures for how the offset will be secured if the responsibility is divided amongst multiple properties or parties.

The Guidelines also state that an NVPP must include mechanisms for tracking the removal of native vegetation and corresponding securing of offsets, to ensure that this occurs in accordance with the NVPP.

The removal, destruction or lopping of native vegetation in accordance with this NVPP, does not require a planning permit provided conditions and requirements specified in this Native Vegetation Precinct Plan are met.

Section 2.3 of the *'Assessor's handbook Applications to remove, destroy or lop native vegetation'* (DELWP 2018) – the Handbook, clarifies when proposed native vegetation removal is 'in accordance with an NVPP', being

- Only the native vegetation which is identified for removal in the NVPP may be removed, destroyed or lopped
- Native vegetation which is identified for removal in this NVPP can only be removed if the purpose of its removal is consistent with the purpose of the NVPP
- The offset specified in the NVPP is secured
- Any other NVPP condition is complied with.

If native vegetation is proposed to be removed, destroyed or lopped not in accordance with this NVPP, a planning permit to remove native vegetation is required under Clause 52.16 of the Greater Geelong Planning Scheme. In this circumstance, an application for a permit must comply with the application requirements specified in the Guidelines. An application to remove native vegetation not in accordance with this incorporated NVPP must be supported by current site information, as per the Handbook (DELWP, 2018) (Assessor's handbook). For the purpose of this document, the term 'remove native vegetation' includes to destroy and to lop native vegetation.

---

## 1.1 Purpose of the NVPP

The purpose of the GAEPW NVPP is to inform decisions about the future development of the precinct area.

It is understood that future land uses at the GAEPW will be designed to support industrial and employment opportunities. This NVPP will address relevant landscape and vegetative considerations including:

- Applying a holistic, landscape wide approach to retention and removal of native vegetation, within the GAEPW NVPP area as identified on NVPP Map 1 (Section 8.1).
- Specify the native vegetation to be protected and the native vegetation that can be removed, destroyed or lopped.
- Set out requirements to offset the removal, destruction or lopping of native vegetation.
- Streamline the planning approvals process through a Precinct wide landscape approach to native vegetation protection and management.

### 1.1.1 *Environment Protection and Biodiversity Conservation Act 1999.*

This NVPP does not cover retention or removal of ecological values qualifying as Matters of National Environmental Significance listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act), or any required offsets for clearance or impacts to such matters for development within the GAEPW under the EPBC Act.

### 1.1.2 *First party offsets*

This NVPP does not detail creation of first party offsets – offsets achieved by landowners or proponents on land where there is vegetation clearance. There is potential for the creation of first party offsets within the Rural Conservation Zone (RCZ), and across areas of native vegetation that may be retained outside of the RCZ. The possible creation of first party offsets is to be investigated by proponents of development – see:

[https://www.environment.vic.gov.au/\\_data/assets/pdf\\_file/0029/329456/First-party-offset-guide.pdf](https://www.environment.vic.gov.au/_data/assets/pdf_file/0029/329456/First-party-offset-guide.pdf).

---

## 1.2 Vegetation protection objectives to be achieved

The objectives of the GAEPW NVPP are to:

- Ensure there is no net loss to biodiversity as a result of the approved removal, destruction or lopping of native vegetation. This is achieved by applying the three-step approach in accordance with Clause 12.01-2 Native vegetation management, Clause 52.16 and the Guidelines.
- Apply a landscape approach to the management of native vegetation within the NVPP area, in accordance with Clause 12.01-1 Protection of biodiversity.
- Manage native vegetation to be retained in accordance with obligations under the *Catchment and Land Protection Act 1994*.
- Ensure that areas set aside to protect native vegetation are managed to conserve biodiversity and other values in accordance with the DPO50 that applies to the GAEPW.

## 2 Area to which NVPP applies

The GAEPW NVPP applies to land within the GAEPW precinct boundary as shown on Map 1 (Section 8.1). Table 2.1 identifies the properties included within the area to which this NVPP applies. Property ID numbers in Map 2 (Section 8.2) correspond to those listed in Table 2.1.

The study area is approximately 940 ha, approximately 11.8 km north east of Geelong. The precinct is bounded by Avalon Airport to the east for the northern portion and private property to the southern eastern boundary, Avalon Road to the west, the Port Phillip Bay Coastal Reserve to the south and Princes Highway to the north. The Precinct is within City of Greater Geelong, and within the Victorian Volcanic Plains bioregion located in the Corangamite Catchment Management Area.

Table 2.1 Land included within the area to which this NVPP applies

| Property | Address                         | PARCEL_PFI | PARCEL_SPI |

### 2.1 Background

#### 2.1.1 Ecological values

Ecological values have been identified within the precinct by the biodiversity assessment: *Biodiversity Assessment for the Greater Avalon (Employment) Precinct, Avalon, Victoria* (EHP, 2025) (BA), which identifies numerous flora and fauna species, and threatened ecological communities listed under both the EPBC Act and FFG Act.

Most of the GAEPW has been extensively altered by historical and ongoing agricultural practices and is now dominated by pasture comprising non-native grasses and weeds. The remaining indigenous vegetation and terrestrial fauna habitat are primarily restricted to properties 2, 5, 9, 10, 13, 14, & 15 and to small, scattered patches in the north. These areas have likely experienced less grazing and have avoided cropping due to the presence of surface rock. The highest quality native vegetation is generally found along an unnamed waterway that runs parallel to Gillets Road. This waterway

originates in the northeast of the precinct, and flows southward, passes under Dandos Road, and exits the precinct at its southernmost point (EHP, 2025)

The BA (EHP, 2025) identifies the following threatened and migratory bird species to have a moderate to high likelihood of occurring within the study area:

- Latham's Snipe *Gallinago hardwickii* (EPBC Act Vulnerable)
- Red Knot *Calidris canutus* (EPBC Act Endangered, FFG Act Endangered)
- Great Knot *Calidris tenuirostris* (EPBC Act Critically Endangered, FFG Act Critically Endangered)
- Greater Sand Plover *Charadrius leschenaultia* (EPBC Act Vulnerable, FFG Act Vulnerable).
- Curlew Sandpiper *Calidris ferruginea* (EPBC Act Critically Endangered, FFG Act Critically Endangered)
- Common Greenshank *Tringa nebularia* (EPBC Act Endangered, FFG Act Endangered)
- Orange-bellied Parrot *Neophema chrysogaster* (EPBC Act Critically Endangered, FFG Act Critically Endangered)
- Blue-winged Parrot *Neophema chrysostoma* (EPBC Act Vulnerable)
- Sharp-tailed Sandpiper *Caladris acuminata* (EPBC Act Vulnerable)
- White-winged Black Tern *Chlidonias leucopterus* (EPBC Act Migratory).

Curlew Sandpiper, Common Greenshank and Blue-winged Parrot have previously been recorded in the study area. The study area was not classified as 'important habitat' as per the EPBC Act Significant Impact Guidelines (DEWHA, 2009), however, the BA states a number of threatened species may occasionally utilise the site for foraging.

Growling Grass Frog *Litoria raniformis* (EPBC Act Vulnerable, FFG Act vulnerable), was not observed during targeted surveys undertaken for the BA along the central unnamed watercourse. As there are records for this species further to the east associated with the Western Treatment Plant, it is reasonable to assume potential dispersal and utilisation of drainage lines and wetlands across Airport land under optimal conditions – current or future. Due to the modified nature of GAEPW (due to salinity and previous earthworks), there is considered a low likelihood of GGF to utilise habitat within GAEPW on a regular basis, but rather more likely to utilise drainage lines and wetlands located within the Avalon Airport land. As a precautionary approach, the GAEPW is considered to support potential aquatic and terrestrial habitat for GGF.

Habitat for Golden Sun Moth *Synemon plana* (EPBC Act Vulnerable, FFG Act vulnerable) has been confirmed to the north and south of Dandos Road on the eastern side of the precinct, and across habitat to the east of Avalon Road in the north-west of the site.

Following targeted surveys for both Striped Legless Lizard *Delma impar* (EPBC Act Vulnerable, FFG Act Endangered), (EHP, 2025) (Biosis, 2023) and Victorian Grassland Earless Dragon *Tympanocryptis pinguicolla* (EPBC Act Critically Endangered, FFG Act Critically Endangered) (Biosis, 2025) there is considered a low likelihood of occurrence of both these species throughout the precinct.

Larger tracts of grassland habitat north and south of Dandos Road are identified as confirmed habitat for Fat-tailed Dunnart *Smithopsis crassicaudata* (FFG Act vulnerable).

One significant Flora species, the Spiny Rice Flower *Pimelea spinescens* (EPBC Act and FFG Act Critically Endangered), occurs along the eastern boundary of the precinct, within the Gillets Road reserve, currently managed as a conservation reserve by council.

The southern portion of Gillets Road reserve, and patches 65, 67, 70, & 77 across recovering salt pans to the east of the central watercourse, also supports 1.615 ha, and 1.197 ha respectively, of the Natural Temperate Grassland of the Victorian Volcanic Plain – NTGVVP, listed as Critically Endangered under the EPBC Act. This grassland also aligns with the description of the FFG Act listed community Western (Basalt) Plains Grassland Community.

WSP undertook a site inspection to undertake a high-level verification of the BA results. Vegetation and mapping across the GAEPW appeared to be broadly representative of on-ground ecological values. Whilst there might have been reason

found for minor corrections or variations to vegetation mapping done for the BA, results would not be significantly, or materially different. WSP found the BA mapping of native vegetation identified as per the *Guidelines for the removal, destruction or lopping of native vegetation* (DELWP, 2017) to be sufficiently accurate and fit for purpose, in addition to correct identification of Threatened Ecological Communities listed under the EPBC Act. WSP also generally concurred with habitat identified for Golden Sun Moth, Fat-tailed Dunnart and Tussock Skink *Pseudemoia pagenstecheri* (FFG Act vulnerable) – BA Figure 8 (EHP, 2025).

## 2.1.2 Planning matters

### 2.1.2.1 Rural Conservation Zone

Areas of higher ecological value are to be protected with a Rural Conservation Zone (RCZ). Three areas are identified as RCZ totalling 260.21 ha. The extent of the RCZ has been informed by a number of factors including:

- At least 100 m wide corridor of habitat along the unnamed central watercourse for migratory shorebirds and waders.
- 50 m buffer of potential aquatic habitat for Growling Grass Frog.
- 50 m buffer of the 1.1 m Sea Level Rise modelling.
- Inclusion of lower lying saline retired salt-pans and mud flats likely to be utilised by migratory shorebirds and waders.
- Inclusion of high-quality NTGVVP along Gillets Road.
- Exclusion of channelised watercourses diverted around the north-west of the retired salt-pans and along Dandos Road intended to be diverted and included in a drainage strategy yet to be finalised.
- Exclusion of habitat that is more sensitive to high-threats present, such as Golden Sun Moth habitat areas now dominated by *Nasella* spp..

Native vegetation within the RCZ has all been identified for retention. Avoidance and minimisation of ecological impacts is intended to be achieved via the retention of all areas within the RCZ. The RCZ is shown in mapping at Section 8.2.

## 3 Native vegetation to be removed

### 3.1 Assessment pathway

The assessment pathway for native vegetation that can be removed is described in the *Native vegetation removal report* attached at Appendix A and Table 3.1.

Table 3.1 Assessment pathway – native vegetation removal

| Assessment pathway                     | Detailed Assessment Pathway                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Extent including past and proposed     | 65.674 hectares                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Extent of past removal                 | 0.000 hectares                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

\* Approved Habitat Importance Map (HIM) exclusions have been applied by the DEECA NVR Team in the preparation of this NVR.

### 3.2 Description of native vegetation to be removed

Ecological values outside of the proposed RCZ are predominantly limited to native vegetation and habitat within retired salt pans, transitioning firstly to low quality Coastal Saltmarsh EVC 9, and then to native and exotic grassland; and highly modified Plains Grassland EVC 132 within agricultural land. NTGVVP identified for removal outside the RCZ are not considered high quality or archetypal examples of this community, are dominated by Wallaby Grass and Spear Grasses, and only considered present due to an absence of remnant top-soil where nutrient poor clays across retired salt pans are recolonised by opportunistic indigenous species favoured by the modified nutrient poor conditions.

Lower quality areas, outside the RCZ, occurring north and south of Dandos Road, include large areas of grassland highly modified by weedy exotic grasses, which do not qualify as native grassland by either State of Commonwealth definitions. These areas provide habitat for threatened fauna species including Golden Sun Moth, Tussock Skink and Fat-tailed Dunnart. Terrestrial Fauna grassland habitat outside of RCZ areas, north and south of Dandos Road, providing habitat for threatened fauna species identified as likely to occur within this area are slated for industrial development. Further ecological impact assessment, development of mitigation measures, or facilitation of development may be undertaken at permit stage (pursuant to clause 52.16 – see discussion below) for these areas for ecological values not accounted for in the NVPP as native vegetation for retention or removal.

Similarly, channelised watercourses through cropping land in the north, and diverted around the north and west of the retired salt-pans and along Dandos Road, are intended to be diverted and included in a drainage strategy yet to be finalised. These areas are considered potential dispersal habitat for Growling Grass Frog and are slated for industrial

development. Ecological impact assessment, development of mitigation measures, or facilitation of development would be undertaken at permit stage for these areas for ecological values not accounted for in the NVPP.

The following native vegetation can be removed, destroyed or lopped without a planning permit, subject to the requirements and conditions set out in this NVPP:

- Native vegetation described in section 3, and Table 3.3 shown in Map 2 (Section 8.2) to this NVPP.
- Native vegetation that does not qualify as a patch of native vegetation or a scattered tree.

Table 3.2 Summary of native vegetation identified for removal by EVC and number of patches.

| Ecological Vegetation Classes   | Number of patches | Total (ha)    |
|---------------------------------|-------------------|---------------|
| Brackish Wetland (EVC 656)      | 1                 | 0.312         |
| Coastal Saltmarsh (EVC 9)       | 36                | 35.741        |
| Plains Grassland (EVC 132)      | 52                | 24.400        |
| Plains Grassy Woodland (EVC 55) | 15                | 0.645         |
| Plains Sedgy Wetland (EVC 647)  | 13                | 4.465         |
| Tall Marsh (EVC 821)            | 1                 | 0.111         |
| <b>Grand Total</b>              | <b>118</b>        | <b>65.674</b> |

Unless an exemption under Clause 52.16 applies, a permit under that clause is required to remove, destroy or lop any native vegetation not accounted for in the NVPP. This includes native vegetation that may have been missed during surveys undertaken for the NVPP, as well as native vegetation that establishes within the precinct following gazettal of the NVPP.

Table 3.3 Native vegetation to be removed

## 4 Native vegetation offsets

The offset requirements for native vegetation to be removed, are described in *Native vegetation removal report* at Appendix A, and Table 4.1 below.

Table 4.1 Total offset requirements for NVPP area

| General offset amount                                          | 5.187 general habitat units                                                                                                                                                                                                                                                                                                                   |

### 4.1 Offset statement

#### 4.1.1 Statement

Possible impacts to native vegetation trigger an offset requirement of 5.187 general habitat units, and 0 large trees, as per *Guidelines for the removal destruction or lopping of native vegetation* (DELWP 2017). The offset required for this project is a relatively small amount of General Habitat Units, with a minimum Strategic Biodiversity Value (SBV) score of 0.397. In addition to this, there are substantial Species Habitat Unit requirements of between approximately 19 – 27 units required for impacts to over 0.005 % of modelled habitat to four FFG Act listed threatened species, and or, a proportionally significant impact on a species. This determination takes into account the value of the modelled habitat being removed - considering its extent, habitat importance score, and condition - relative to the value of all modelled habitat across the State. Offset requirements are provided per habitat zone to be removed, as shown in mapping at section 8.2, in Table 4.2 below.

<sup>1</sup> This is intended as a non-binding recommendation only.

A search of the Native Vegetation Credit Register - NVCR, has confirmed that the General Habitat Units are readily available through DEECA's accredited third-party offset brokers. With regards to species offsets, there are no currently available offsets, or potential offsets sites registered, offering the required species offset amounts. Required species offsets will have to be established. These NVCR searches are attached at Appendix B.

During preparation of the NVPP desktop and field investigation of unregistered sites has been undertaken by landowners and their consultants. Those investigations have indicated that suitable properties are available, that:

- Provide suitable native vegetation and modelled habitat for relevant species and are proposed for registration through the NVCR; and/or,
- Provide suitable native vegetation and habitat characteristics for threatened species and are therefore suitable to progress through an alternative offset pathway in consultation with DEECA.

Any information on the potential sites will be prepared and submitted to DEECA to confirm their suitability, including evidence of landowner support.

As mentioned in Section 1.1.2 this NVPP does not cover the possibility for the establishment of first party offsets, this would be the responsibility of landowners or proponents on land where there is vegetation clearance - see [https://www.environment.vic.gov.au/\\_data/assets/pdf\\_file/0029/329456/First-party-offset-guide.pdf](https://www.environment.vic.gov.au/_data/assets/pdf_file/0029/329456/First-party-offset-guide.pdf).

Native vegetation patches to be offset have not been divided across land lots, or split between priority retention areas. Proportional splitting of GHUs and SHUs should be applied where patches span different ownerships. Required offset amounts will be required to be calculated based on complete (unsplit) removal features, by manually apportioning the obligations based on the areas of features to be split across ownership boundaries.

If partial removal of a patch is to occur within a single parcel, that being only a portion of a whole patch identified to be retained, the full offset obligation must still be met.

#### **4.1.2      *Collection of payments***

Offsets are to be achieved by proponents of development via an accredited broker via: [List of NVOR service providers - site assessors and brokers \(environment.vic.gov.au\)](#).

Prior to the removal of any native vegetation, a statement of intention to remove native vegetation must be provided to the satisfaction of the responsible authority. The statement must include the purpose of the native vegetation removal and evidence that an offset has been secured. The offset must meet the offset requirements set out in this NVPP and delivered in accordance with the requirements of the Guidelines. Offset evidence can be:

- A security agreement to the required standard for the offset site or sites, including a 10 year offset management plan signed by both parties.
- A credit extract from the Native Vegetation Credit Register.
- Other evidence that meets the requirements described in Section 6 of this NVPP. The requirement to provide a statement of intention to remove native vegetation to the satisfaction of the responsible authority prior to the removal of any native vegetation must be specified as a condition to the NVPP.

Table 4.2 Offset requirements per patch identified for potential removal as per NVR at Appendix A.

# 5 Native vegetation to be retained

## 5.1 Description of native vegetation to be retained

WSP have worked with VPA (now a part of the Department of Transport and Planning) to finalise three conservation areas of totalling 260.21 ha to be protected within an RCZ, as discussed in section 2.1.2.1 above.

Proposed RCZ areas include a total of 110.143 ha of native vegetation attributable to 6 EVC including Plains Grassland EVC 132 regenerating on retired salt-pans, some small patches throughout agricultural land and some smaller higher quality patches along Gillets Road being habitat for Spiny Rice-flower. Native vegetation to be retained along Gillets Road also qualified as the EPBC Act listed Community Natural Temperate Grassland of the Victorian Volcanic Plain. A Large wetland south of Dandos Road within the proposed RCZ is identified as Plains Grassy Wetland EVC 125, however this appears highly modified by weeds and grazing pressures. The unnamed creek line running north-south within the proposed RCZ supports varying quality Coastal Saltmarsh EVC 9 and Brackish Wetland EVC 656, and provides foraging and dispersal habitat for Blue-winged Parrot, Orange Bellied Parrot and Growling Grass Frog. There are no scattered trees, or canopy trees within the precinct.

The native vegetation to be retained is summarised in Table 5.1 and shown in Map 2 (Section 8.2) to this NVPP.

It should be noted that any future removal of native vegetation which has been identified as ‘to be retained’ may undermine the strategic approach adopted for the preparation of this NVPP.

Table 5.1 Summary of Native vegetation to be retained

| Ecological Vegetation Classes   | Area (ha)      |
|---------------------------------|----------------|
| Brackish Grassland (EVC 934)    | 2.129          |
| Brackish Wetland (EVC 656)      | 4.641          |
| Coastal Saltmarsh (EVC 9)       | 93.575         |
| Plains Grassland (EVC 132)      | 5.258          |
| Plains Grassy Wetland (EVC 125) | 4.441          |
| Plains Grassy Woodland (EVC 55) | 0.105          |
| <b>Total</b>                    | <b>110.143</b> |

## 6 Conditions for the removal of native vegetation

The native vegetation identified in Table 3.2 and Table 3.3 and shown in Map 2 (Section 8.2) to this NVPP can be removed, destroyed or lopped without a planning permit as allowed under Clause 52.16, subject to the following conditions. For native vegetation that does not qualify as a patch or a scattered tree, a permit is not required for its removal, destruction or lopping.

The removal, destruction or lopping of native vegetation must be in accordance with this NVPP. Only the native vegetation which is identified for removal in this NVPP are to be removed, destroyed or lopped. Native vegetation which is identified for removal in this NVPP can only be removed if the purpose of its removal is in accordance with the purpose of this NVPP.

- a. Prior to the removal of any native vegetation, a statement of intention to remove native vegetation must be provided to the satisfaction of the responsible authority. The statement must include:
  - i. The purpose of the native vegetation removal.
  - ii. Evidence that an offset has been secured. The offset must meet the offset requirements set out in this NVPP and delivered in accordance with the requirements of *Guidelines for the removal, destruction or lopping of native vegetation*. Offset evidence can be:
    - A security agreement (signed by both parties) to the required standard for the offset site or sites, including a 10 year offset management plan.
    - An allocated credit extract from the Native Vegetation Credit Register.
    - Other evidence that meets the requirements described in Section 5 of this NVPP.
- b. For any native vegetation that appears following approval of this NVPP, it should be assessed at permit stage and added to the offset requirements as prescribed in this NVPP. An updated NVR will be required, inclusive of all native vegetation identified for removal within the GAEPW – past and present.
- c. The vegetation removal is done within the period of validity of this report. NVPP shall remain valid for a period of 10 years from the date of its incorporation into the Greater Geelong Planning Scheme under Clause 52.16. After this period, the NVPP will expire unless reviewed and endorsed by the DEECA and the responsible authority. Upon expiry:
  - Any proposed removal, destruction or lopping of native vegetation within the GAEPW will require a planning permit application under Clause 52.17, supported by current site assessments and offset calculations in accordance with the Guidelines for the removal, destruction or lopping of native vegetation, or its successor.
  - Offset obligations identified within this NVPP will no longer be applicable unless secured prior to the sunset date.
  - Landowners and developers must provide offset evidence to the responsible authority for all offsets secured under this NVPP.
- d. Water run-off should be designed to ensure that native vegetation to be retained is not compromised. This may be by means of Water Sensitive Urban Design techniques such as stormwater treatment wetlands, bio-retention systems, porous paving or swales.

# 7 Recommendations

In addition to the requirements listed in section 6 above, it is recommended that particular caution around ecological values present at GAEPW at permit stage is taken around:

- Terrestrial Fauna grassland habitat which is outside of RCZ areas, north and south of Dandos Road providing habitat for threatened fauna species identified as likely to occur within this area, that is slated for industrial development. Consideration for the retention and rehabilitation of habitat within these areas should be given in designing habitat nodes, and linkages along walking and cycling paths.
- Similarly, channelised watercourses through cropping land in the north, and diverted around the north and west of the retired salt-pans and along Dandos Road, are intended to be diverted and included in a drainage strategy yet to be finalised. These areas are considered potential dispersal habitat for Growling Grass Frog, and are slated for industrial development.
- It is likely that with Sea Level Rise, and any reinstatement of tidal connectivity to lower-lying and higher quality Coastal Saltmarsh EVC 09, that these areas will qualify as the EPBC Act Vulnerable TEC 'Temperate Coastal Saltmarsh'. It is recommended that consideration be made to increasing tidal connectivity where appropriate to allow for natural growth of Temperate Coastal Saltmarsh in line with the Conservation Advice for this TEC (Committee, 2013).
- It is recommended that the risk of indirect impacts to native vegetation from any hydrological changes resulting from development be considered and mitigated. It is recommended that due consideration be given to the potential expansion of the Ramsar site – Port Phillip Bay (Western Shoreline) and Bellarine Peninsula, across land to the south of the GAEPW.
- Retention of native vegetation and habitat outside of the RCZ is recommended as much as practicable. Large areas of native vegetation should be protected in habitat nodes.
- Landscaping and revegetation should provide flora and fauna habitats to promote biodiversity:
  - Undertake habitat creation (i.e. waterways, drainage lines and designated revegetation areas)
  - Provide linear corridors of vegetation along walking/cycling tracks
  - Create linear habitat corridors along waterways/drainage lines/tributaries whilst implementing Water Sensitive Urban Design and ensuring no off-site impacts
  - Incorporating drainage lines into habitat corridors and open public spaces
  - Landscaping should use indigenous species typical of the most likely Ecological Vegetation Classes for the revegetation areas.
  - It is recommended that a specialist in the area of bird strike around airports be consulted during the preparation of revegetation plans.
- If following progression of efforts to avoid and minimise impacts, revision of clearance areas and NVR offset targets are to be required, in this instance, an updated NVR will be required, inclusive of all native vegetation identified for removal within the GAEPW – past and present.
- Control of noxious weeds should be undertaken to reduce further degrading impacts to the existing remnant ecological values present within the study area and surrounds.
- Habitat creation such as nest boxes and habitat logs should be included in any conservation management plans as recommended in the BA, although this should be done in concert with a Bird Strike specialist.

- Domestic Animal Control should be considered, where applicable, such as exclusion of dogs within conservation areas.
- Access to areas of ecological value should be discouraged by design.
- Awareness of ecological values should be promoted by appropriate signage.

# Appendix A

## Native Vegetation Removal Report

This report provides information to support an application to remove, destroy or lop native vegetation in accordance with the *Guidelines for the removal, destruction or lopping of native vegetation*. The report **is not an assessment by DELWP** of the proposed native vegetation removal. Native vegetation information and offset requirements have been determined using spatial data provided by the applicant or their consultant. **Note: Approved Habitat Importance Map (HIM) exclusions have been applied by the DEECA NVR Team in the preparation of this report.**

NB: values within tables in this document may not add to the totals shown above due to rounding

Appendix 1 includes information about the native vegetation to be removed

Appendix 2 includes information about the rare or threatened species mapped at the site.

Appendix 3 includes maps showing native vegetation to be removed and extracts of relevant species habitat importance maps

<sup>1</sup> The general offset amount required is the sum of all general habitat units in Appendix 1.

<sup>2</sup> Minimum strategic biodiversity score is 80 per cent of the weighted average score across habitat zones where a general offset is required

<sup>3</sup> The species offset amount(s) required is the sum of all species habitat units in Appendix 1.

## Next steps

Any proposal to remove native vegetation must meet the application requirements of the Detailed Assessment Pathway and it will be assessed under the Detailed Assessment Pathway.

If you wish to remove the mapped native vegetation you are required to apply for a permit from your local council. Council will refer your application to DELWP for assessment, as required. **This report is not a referral assessment by DELWP.**

This *Native vegetation removal report* must be submitted with your application for a permit to remove, destroy or lop native vegetation.

Refer to the *Guidelines for the removal, destruction or lopping of native vegetation* (the Guidelines) for a full list of application requirements. This report provides information that meets the following application requirements:

- The assessment pathway and reason for the assessment pathway
- A description of the native vegetation to be removed (partly met)
- Maps showing the native vegetation and property (partly met)
- Information about the impacts on rare or threatened species.
- The offset requirements determined in accordance with section 5 of the Guidelines that apply if approval is granted to remove native vegetation.

Additional application requirements must be met including:

- Topographical and land information
- Recent dated photographs
- Details of past native vegetation removal
- An avoid and minimise statement
- A copy of any Property Vegetation Plan that applies
- A defensible space statement as applicable
- A statement about the Native Vegetation Precinct Plan as applicable
- A site assessment report including a habitat hectare assessment of any patches of native vegetation and details of trees
- An offset statement that explains that an offset has been identified and how it will be secured.

This publication may be of assistance to you but the State of Victoria and its employees do not guarantee that the publication is without flaw of any kind or is wholly appropriate for your particular purposes and therefore disclaims all liability for any error, loss or other consequence which may arise from you relying on any information in this publication.

Obtaining this publication does not guarantee that an application will meet the requirements of Clauses 52.16 or 52.17 of the Victoria Planning Provisions and Victorian planning schemes or that a permit to remove native vegetation will be granted.

Notwithstanding anything else contained in this publication, you must ensure that you comply with all relevant laws, legislation, awards or orders and that you obtain and comply with all permits, approvals and the like that affect, are applicable or are necessary to undertake any action to remove, lop or destroy or otherwise deal with any native vegetation or that apply to matters within the scope of Clauses 52.16 or 52.17 of the Victoria Planning Provisions and Victorian planning schemes.

## Appendix 1: Description of native vegetation to be removed

The species-general offset test was applied to your proposal. This test determines if the proposed removal of native vegetation has a proportional impact on any rare or threatened species habitats above the species offset threshold. The threshold is set at 0.005 per cent of the mapped habitat value for a species. When the proportional impact is above the species offset threshold a species offset is required. This test is done for all species mapped at the site. Multiple species offsets will be required if the species offset threshold is exceeded for multiple species.

Where a zone requires species offset(s), the species habitat units for each species in that zone is calculated by the following equation in accordance with the Guidelines:

$$\text{Species habitat units} = \text{extent} \times \text{condition} \times \text{species landscape factor} \times 2, \text{ where the species landscape factor} = 0.5 + (\text{habitat importance score}/2)$$

The species offset amount(s) required is the sum of all species habitat units per zone

Where a zone does not require a species offset, the general habitat units in that zone is calculated by the following equation in accordance with the Guidelines:

$$\text{General habitat units} = \text{extent} \times \text{condition} \times \text{general landscape factor} \times 1.5, \text{ where the general landscape factor} = 0.5 + (\text{strategic biodiversity value score}/2)$$

The general offset amount required is the sum of all general habitat units per zone.

| Chestnut-rumped Heathwren | <i>Calamanthus pyrrhopygius</i>            | 10498  | Vulnerable            | Dispersed | Habitat importance map | 0.0000 |
| White-throated Needletail | <i>Hirundapus caudacutus</i>               | 10334  | Vulnerable            | Dispersed | Habitat importance map | 0.0000 |
| Cane Spear-grass          | <i>Austrostipa breviglumis</i>             | 503268 | Rare                  | Dispersed | Habitat importance map | 0.0000 |

#### Habitat group

- Highly localised habitat means there is 2000 hectares or less mapped habitat for the species
- Dispersed habitat means there is more than 2000 hectares of mapped habitat for the species

#### Habitat impacted

- Habitat importance maps are the maps defined in the Guidelines that include all the mapped habitat for a rare or threatened species
- Top ranking maps are the maps defined in the Guidelines that depict the important areas of a dispersed species habitat, developed from the highest habitat importance scores in dispersed species habitat maps and selected VBA records
- Selected VBA record is an area in Victoria that represents a large population, roosting or breeding site etc.

# Appendix 3 – Images of mapped native vegetation

## 2. Strategic biodiversity values map

## 3. Aerial photograph showing mapped native vegetation

#### 4. Map of the property in context

Yellow boundaries denote areas of proposed native vegetation removal.

4. Habitat importance maps

Prickly Arrowgrass  
*Triglochin mucronata*  
503447

Little Tern  
*Sterna albifrons sinensis*  
10117

Fairy Tern  
*Sterna nereis nereis*  
10118

Creeping Rush  
*Juncus revolutus*  
501839

# Appendix B

Report of available native vegetation credits –  
08/04/2026

# Report of available native vegetation credits

This report lists native vegetation credits available to purchase through the Native Vegetation Credit Register.

This report is **not evidence** that an offset has been secured. An offset is only secured when the units have been purchased and allocated to a permit or other approval and an allocated credit extract is provided by the Native Vegetation Credit Register.

Date and time: 08/04/2026 11:01

Report ID: 34944

## What was searched for?

### General offset

| General habitat units | Strategic biodiversity value | Large trees | Vicinity (Catchment Management Authority or Municipal district) |                      |
|-----------------------|------------------------------|-------------|-----------------------------------------------------------------|----------------------|
| 5.187                 | 0.397                        | 0           | CMA                                                             | Corangamite          |

### These sites meet your requirements using alternative arrangements for general offsets.

| Credit Site ID | GHU | LT | CMA | LGA | Land owner | Trader | Fixed price | Broker(s) |
|----------------|-----|----|-----|-----|------------|--------|-------------|-----------|
|----------------|-----|----|-----|-----|------------|--------|-------------|-----------|

There are no sites listed in the Native Vegetation Credit Register that meet your offset requirements when applying the alternative arrangements as listed in section 11.2 of the Guidelines for the removal, destruction or lopping of native vegetation.

**These potential sites are not yet available, land owners may finalise them once a buyer is confirmed.**

| Credit Site ID | GHU | LT | CMA | LGA | Land owner | Trader | Fixed price | Broker(s) |
|----------------|-----|----|-----|-----|------------|--------|-------------|-----------|
|----------------|-----|----|-----|-----|------------|--------|-------------|-----------|

There are no potential sites listed in the Native Vegetation Credit Register that meet your offset requirements.

LT - Large Trees

CMA - Catchment Management Authority

LGA - Municipal District or Local Government Authority

## Next steps

### If applying for approval to remove native vegetation

Attach this report to an application to remove native vegetation as evidence that your offset requirement is currently available.

### If you have approval to remove native vegetation

Below are the contact details for all brokers. Contact the broker(s) listed for the credit site(s) that meet your offset requirements. These are shown in the above tables. If more than one broker or site is listed, you should get more than one quote before deciding which offset to secure.

### Disclaimer

This publication may be of assistance to you but the State of Victoria and its employees do not guarantee that the publication is without flaw of any kind or is wholly appropriate for your particular purposes and therefore disclaims all liability for any error, loss or other consequence which may arise from you relying on any information in this publication.

Obtaining this publication does not guarantee that the credits shown will be available in the Native Vegetation Credit Register either now or at a later time when a purchase of native vegetation credits is planned.

Notwithstanding anything else contained in this publication, you must ensure that you comply with all relevant laws, legislation, awards or orders and that you obtain and comply with all permits, approvals and the like that affect, are applicable or are necessary to undertake any action to remove, lop or destroy or otherwise deal with any native vegetation or that apply to matters within the scope of Clauses 52.16 or 52.17 of the Victoria Planning Provisions and Victorian planning schemes

# Report of available native vegetation credits

This report lists native vegetation credits available to purchase through the Native Vegetation Credit Register.

This report is **not evidence** that an offset has been secured. An offset is only secured when the units have been purchased and allocated to a permit or other approval and an allocated credit extract is provided by the Native Vegetation Credit Register.

Date and time: 08/04/2026 11:03

Report ID: 34945

## What was searched for?

### Species offset

| Common Name ( <i>Scientific name</i> )             | Species habitat units |
|----------------------------------------------------|-----------------------|
| Prickly Arrowgrass ( <i>Triglochin mucronata</i> ) | 19.327                |
| Little Tern ( <i>Sterna albifrons sinensis</i> )   | 26.989                |
| Fairy Tern ( <i>Sterna nereis nereis</i> )         | 25.478                |
| Creeping Rush ( <i>Juncus revolutus</i> )          | 18.81                 |
| with number of large trees                         | 0                     |

## Details of available native vegetation credits on 08 April 2026 11:03

### These sites meet all your requirements for species offsets.

| Credit Site ID | LT | CMA | LGA | Land owner | Trader | Fixed price | Broker(s) |
|----------------|----|-----|-----|------------|--------|-------------|-----------|
|----------------|----|-----|-----|------------|--------|-------------|-----------|

There are no sites listed in the Native Vegetation Credit Register that meet your offset requirements.

### These sites meet some of your requirements for species offsets, you may be able to meet all your requirements across multiple sites.

| Credit Site ID | LT | CMA | LGA | Land owner | Trader | Fixed price | Broker(s) |
|----------------|----|-----|-----|------------|--------|-------------|-----------|
|----------------|----|-----|-----|------------|--------|-------------|-----------|

There are no sites listed in the Native Vegetation Credit Register that meet some of your offset requirements.

### These potential sites are not yet available, land owners may finalise them once a buyer is confirmed.

| Credit Site ID | LT | CMA | LGA | Land owner | Trader | Fixed price | Broker(s) |
|----------------|----|-----|-----|------------|--------|-------------|-----------|
|----------------|----|-----|-----|------------|--------|-------------|-----------|

There are no potential sites listed in the Native Vegetation Credit Register that meet your offset requirements.

LT - Large Trees

CMA - Catchment Management Authority

LGA - Municipal District or Local Government Authority

## Next steps

### If applying for approval to remove native vegetation

Attach this report to an application to remove native vegetation as evidence that your offset requirement is currently available.

### If you have approval to remove native vegetation

Below are the contact details for all brokers. Contact the broker(s) listed for the credit site(s) that meet your offset requirements. These are shown in the above tables. If more than one broker or site is listed, you should get more than one quote before deciding which offset to secure.

## Broker contact details
